

We are looking for a skilled Greenhouse Gardener.

Are you looking for new challenges and ready to take part in a modern and well-functioning potted plant production in one of our 3 departments, we would like to hear from you.

We expect you to have experience with plant cultivation in greenhouses. Today we produce Kordana® pot roses, Campanula and Schlumbergera in different pot sizes.

The tasks will challenge your abilities and skills around watering, spraying, disease and pests, biological control and daily care in general. Your "green fingers" will tingle to get started.

We expect you to be stable, careful, and responsible. You are going to be part of a strong and well-functioning team of colleagues with a focus on Rosa Danica's core task of "Producing and selling high-quality potted plants that meet customer needs".

You will also need to be able to be included in the weekend shift scheme.

Accession by appointment.

If the above has caught to your interest, we would love to hear from you.
